Cost Optimization Overview

Financial Impact Summary

Azure Advisor has identified **\$ in annual cost savings** across cost optimization opportunities. This represents **\$ per month** in potential savings. Implementation of these recommendations can significantly reduce your Azure spending while maintaining or improving service quality.

Top Cost-Saving Opportunities

These recommendations offer the highest potential for cost reduction. Prioritize implementation based on your organization's budget cycles and resource availability.

#	Recommendation	Resource	Impact	Annual Savings
Total Potential Savings:				\$

Savings Breakdown by Category

CategoryCountTotal Annual Savings% of Total Savings

Quick Wins - Easy Implementation

Low Effort, High Impact: These 3 recommendations can be implemented quickly with minimal disruption while providing immediate cost savings.

Recommendation	Resource	Effort	Savings
Consider virtual machine reserved instance to save over the on-demand costs	3a658a26-399e-409d-9606-d3ead247208d	LOW	\$12604
Consider purchasing a savings plan for compute to unlock lower prices	3a658a26-399e-409d-9606-d3ead247208d	LOW	\$10490
Right-size or shutdown underutilized virtual machines	svrsap	LOW	\$6684

Complete Cost Optimization Recommendations

Below is the complete list of all cost-related recommendations. Each recommendation includes detailed information about the resource, potential savings, and implementation guidance.

Consider virtual machine reserved instance to save over the on-demand costs

Implementation Roadmap

Recommended Implementation Phases

Phase 1: Immediate (Week 1-2) - \$ savings

- Implement quick wins with low effort and high return
- Focus on high-impact, high-savings recommendations
- Estimated implementation time: 2-4 hours

Phase 2: Short-term (Week 3-4) - \$ savings

- Medium-complexity optimizations
- May require planning and testing
- Estimated implementation time: 1-2 weeks

Phase 3: Long-term (Month 2-3) - \$ savings

- Complex optimizations requiring significant changes
- May require architectural review
- Estimated implementation time: 2-4 weeks

Next Steps

1. **Review and Prioritize:** Assess each recommendation based on business impact and resource availability
2. **Start with Quick Wins:** Implement low-effort, high-value optimizations first to build momentum
3. **Create Implementation Plan:** Develop a phased approach with timelines and ownership
4. **Monitor and Measure:** Track actual savings achieved vs. projected savings
5. **Regular Reviews:** Schedule monthly Azure Advisor reviews to catch new optimization opportunities

Note: Cost savings are estimates based on Azure Advisor recommendations. Actual savings may vary based on implementation approach, resource usage patterns, and other factors. We recommend validating savings in a test environment before implementing in production. Some recommendations may require architectural changes or may not be applicable to your specific use case.

Disclaimer: This report was automatically generated from Azure Advisor recommendations. All data is sourced from Microsoft Azure Advisor as of October 23, 2025. Recommendations should be evaluated by qualified technical personnel before implementation. Potential savings estimates are provided by Azure Advisor and actual savings may vary based on usage patterns, pricing changes, and implementation timing.
